EPIDEMILOGY & BIOSTATISTICS

DRIVING health THROUGH discovery

College of Public Health
The PhD program in Epidemiology and Biostatistics at the University of Kentucky College of Public Health prepares students to address the practical challenges of conducting population-based, clinical, and translational research. Our alumni work in academia, government, and industry. This dual-focus program provides the cross-training and mentoring needed to develop independent researchers who are skilled in designing and conducting studies—as well as analyzing and interpreting the results from an increasing variety of designs and databases in public health and medical research.

“I’m challenged every day, but I know my classmates and professors are my biggest supporters. UK is a place where they want you to succeed, and will do anything to help you get there. And I love Lexington. As a girl born and raised in New York City, I never knew that this was where I would feel right at home.”

-Monica Cipriani
First Year PhD Student
WHO SHOULD APPLY?

A prior master's degree (MS, MPH, MA) in epidemiology, statistics, biostatistics, or a related field incorporating master's level coursework in epidemiology or biostatistics as part of the degree program is required for admission.
